TURNSTILE MODULE

algeco®

ALGECO turnstile container is part of every structure with increased demands on safety and entrance control. In the field of building industry, our turnstiles are used mainly alongside time and attendance system to control entries of particular employees.
In its basic version, the turnstile software is able to administer more than two thousand active users including training validity, and it blocks up the access automatically after the termination is reported in advance.

In the realm of events and social events, the turnstiles are used to read the entrance tickets, bar codes, QR codes, and many others ...

CORROSION PROTECTION

Steel structure is treated with an active corrosion protection; outer parts in the frame are made of zinc-plated material.

EXTERNAL COLOUR

Two-component varnish RAL 1015 - ivory.

TURNSTILE EQUIPMENT

- 2× TRIPOD stainless drop arm turnstile with IP coverage for outside application
- 4× reader of entrance cards and chips
- option of programming with customer´s existing cards
- 2× control unit for each turnstile separately

- option of matching up and controlling with customer´s software
- PC including access system with new cards / accesses to the system
- card reader to record new cards / accesses to the system

SOFTWARE

The software application for PC with OS Windows is used to manage the access system completely and clearly. It makes it possible to administer the users and their access elements, to set up access advanced parameters, including access restrictions at a non-identifiable time and necessity to use several cards to open the entrance.
To monitor the condition for door opening in a real time, to inspect the protocols etc.

SOFTWARE BASIC EQUIPMENT

- administration of 2000 active users at once
- visitor function
- registration of OSH training; after the training validity expires, the card is blocked up automatically
- remote control and access management
- anti-pass back

- bespoke adjustment of accesses
- time prevention of entrance for selected users
- interconnection of several locks
- opening using several cards - double access authorization (visitor with escort)
- motion recording, search in records, alarm recording

OPTIONS TO EXTEND THE SOFTWARE

- attendance system
- random selection (personal check of things taken out)

- random selection – alcohol checking
- recording of particular users´ attendance
- bar code, QR code reading
- connection of surveillance system
