- ✓ separate spaces to reduce the risk of infection
- ✓ 360° SERVICE including consulting and planning
- ✓ cleaning performed by trained professionals
- ✓ available across the whole Czech and Slovak Republic
- ✓ short delivery time
- ✓ easy setup

SANITARY MEASURES

Modules are always disinfected for 30 minutes before and after they are removed from storage using Anosan® Verneblern. Anosan® is a strong oxidizing agent which destroys the structure of virus capsids, including the capsids of coronavirus (COVID-19). The disinfecting abilities of Anosan® were proven by the manufacturer.
