QUALITY AND SERVICE

Quality

Our mobile fences are made by a special manufacturing process. In this process, each transverse frame tube with rounded ends is cone-shaped in order to ensure 100% strength of the weld around the tube in the frame. Only in this way we can avoid cracking of the side tube, which would lead to welds cracking.

The strongest and most durable fencing connections system:

- incredible joint strength - up to 70% stronger than traditional joint
- unrivalled testing procedures, each piece is rigorously tested up to 500 kg
- uniform appearance of frames thanks to stretched fence netting
- each wire is welded to the fence frame in order to increase the strength and quality unlike traditionally made fences

In response to increasing demand on world markets we extended the portfolio of our services by mobile fencing.

Algeco belonging to a group of Algeco Scotsman is a major supplier of modular buildings and site facilities and provider of comprehensive business services focused on modular spaces. Global format of Algeco Scotsman in combination with the knowledge of the local market provides exemplary services tailored to the specific needs of customers worldwide.

Our main objective is the ratio of low prices and the best quality and performance. More information about us and our supplied products can be found in this brochure and on www.algeco.cz.

**So that you can concentrate
on what's important**

OUR PRODUCTS

Mobile fencing ALGECO EURO

Characteristic welded frame with 100 mm netting with wire thickness 3.3 mm. The frame is formed with tubes with a diameter of 25 mm (horizontal) and 40 mm (vertically), wall thickness of 1.2 mm.

All fences are manufactured using technology SmartWeld 100. SmartWeld is a registered trademark for mobile fencing.

Mobile fencing can of course be equipped with gates for pedestrians or vehicles.

Mobile fencing ALGECO FULL

Panel thickness of 2.3 mm is formed by angled bars and tubes and trapezoidal metal plate. Galvanized or color variations are available. It can be combined with all types of gates and wickets. In this system we also offer non-transparent gates and wickets.

Available fastening systems

Our offer includes of course various fastening systems and accessories: using clutch (standard, enhanced or special key) or system of hooks.

MOBILE BARRIER

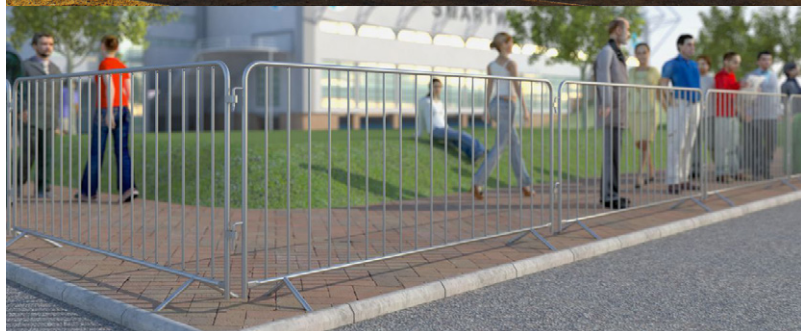

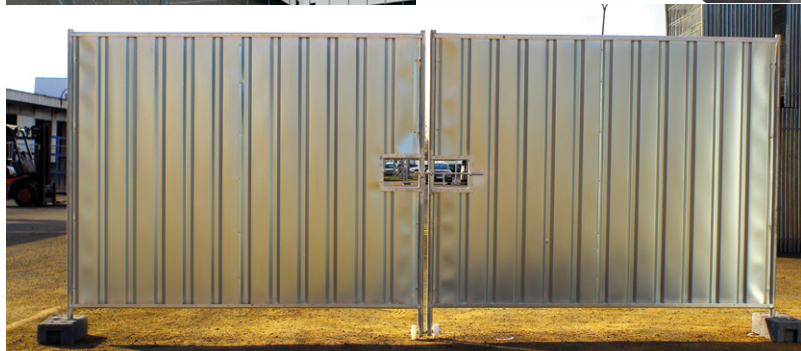

Mobile safety barrier. Galvanized surface (hot-dip galvanization) - high resistance. Rounded top corners.

Width: 2585 mm, Height: 1100 mm, Weight: 15.5 kg

SERVICE

„We do not speak about service, we implement service.“

Thanks to constant keeping of appropriate amount of inventories and close cooperation with transport companies our products are delivered to customers in the Czech and Slovak Republic within 24 hours.
